Predstavitev podjetja

gorenje KERAMIKA

Vsako leto so trendi oblikovanja notranjih prostorov osredotočeni v iskanje nečesa novega, drugačnega.

Gorenje Keramika na najnovejše modne trende oblikovanja notranjih prostorov odgovarja z bogatimi kolekcijami ploščic. Videz ploščic Gorenje Keramika upošteva ključne elemente oblikovanja notranjih prostorov in jih dosega z uporabo najsodobnejših materialov in tehnologij dekoracije ploščic.

Novi katalog je odraz naše usmeritve pri soustvarjanju najsodobnejših in aktualnih modnih trendov na tem področju.

Naša vizija je, da nadaljujemo s tem pristopom in v svetu oblikovanja notranjih prostorov nudimo napredne in sodobne rešitve tudi v prihodnje.

Priznana blagovna znamka v regiji

Gorenje Keramika je najmočnejša blagovna znamka na domačem trgu in specializirani izvajalec keramičnih stenskih ploščic z uporabo tehnologije monoporosa, keramičnih talnih ploščic z uporabo tehnologije monocottura in dekornih ploščic.

Zgodovina

1974:

- zgrajena tovarna keramičnih ploščic
- letna zmogljivost tovarne je znašala 1 milijon m² v tehnologiji bicottura

1986–1989:

- tehnična in tehnološka posodobitev tovarne s prehodom z dvojnega žganja (bicottura) na enojno žganje (monocottura)

2001:

- investicija v dvokanalno valjčno peč in opremo za proizvodnjo granulata
- uvedba monoporozne tehnologije za proizvodnjo stenskih ploščic

2008–2013:

- energetska optimizacija in ekološka sanacija proizvodnje
- znižanje emisij toplogrednih plinov, izboljšanje energetske učinkovitosti zaradi uporabe zemeljskega plina in tehnik racionalne rabe energije
- uporaba najboljših razpoložljivih tehnik v proizvodnji ploščic

2014 in 2015:

- investicija v opremo za proizvodnjo ploščic večjih formatov, modernizacija medfaznega skladišča in linije za pakiranje ploščic
- uvedba digitalne tehnologije dekoriranja

2017:

- uvedba gres tehnologije v dimenzijah 15x60 in 30x60 cm

2018:

- uvedba 3D tehnologije

Širok izbor izdelkov za vaš dom

Gorenje Keramika razvija in proizvaja izdelke za notranjost in zunanjost z upoštevanjem najnovejših trendov in dimenzijs. Prodajni program obsega stenske ploščice dimenzijs 20x20, 20x40, 25x40, 20x50, 25x60, talne ploščice 33,3x33,3, 40x40 ter mrazoodporne ploščice 15x60 in 30x60 cm.

Gorenje Keramika razvija in na trž uvaja izdelke, proizvedene v digitalni tehnologiji.

Novi izdelki ponujajo popolno zadovoljstvo pri izpolnjevanju zahtev in pričakovanj kupcev.

Naše okoljevarstvene zahteve – popolnoma 'zelene ploščice'

'Zelene ploščice' Gorenje Keramika pomenijo našo zavezanost trajnostnemu razvoju okolja, prisotno v vsakem izdelku in vseh fazah proizvodnje, vključno z distribucijo in življenjskim ciklom izdelka v uporabi.

The Company presentation

Each year, interior design trends are focused on finding something new and different. Gorenje Keramika responds to the latest interior design trends with multiple collections of ceramic tiles. The Gorenje Keramika ceramic tiles design follows the key elements of interior design and uses state-of-the-art materials and technologies in tile decoration.

The new catalogue reflects our policy in contributing to the contemporary and current trends in the industry.

Our vision is to continue this approach and keep offering advanced and contemporary solutions in interior design.

A recognised brand in the region

Gorenje Keramika is the strongest brand on the Slovenian market and a specialised producer of monoporosa wall tiles and monocottura floor tiles, as well as decorated tiles.

History

1974:

- Ceramic tiles plant was built
- The plant's annual performance was 1 million m² of bicottura tiles

1986 – 1989:

- Technical and technological modernisation of the plant by switching from the double-fired (bicottura) technology to the single-fired (monocottura technology)

2001:

- Investment into a double-channel roller kiln and equipment for the production of granulate
- Introduction of the monoporosa technology for the production of wall tiles

2008 - 2013:

- Energy optimisation and ecological rehabilitation of the production
- Reduction of greenhouse gas emissions, improving energy efficiency by using natural gas and rational energy consumption techniques
- Using the best available techniques in tile production

2014-2015:

- Investment into larger tile production equipment, modernisation of mid-phase storage and packaging line
- Introduction of digital decoration technology

2017:

- Introduction of gres technology in sizes 15x60 and 30x60 cm

2018:

- Introduction of 3D technology

A wide range of products for your home

Gorenje Keramika develops and manufactures its products for interior and exterior, while following the latest trends and dimensions. The sales programme includes wall tiles in the following sizes: 20x20, 20x40, 25x40, 20x50, 25x60, floor tiles in the following sizes: 33,3x33,3, and 40x40, gres tiles in the following sizes: 15x60 and 30x60 cm. Gorenje Keramika develops and introduces digitally manufactured products to the market. Our new products offer complete satisfaction and meet the demands and expectations of our buyers.

Our environmental requirements – perfectly 'green tiles'

The Gorenje Keramika 'green tiles' represent our commitment to sustainable environment development. It is reflected in every product and in all the phases of production, including the distribution and the product's service life.

Tehnične informacije

Technical information

Tehnične informacije

Spoštovani kupci!

V pomoč za preprečitev morebitnih pritožb strank vam priporočamo, da vsem, ki se oskrbujejo s keramičnimi ploščicami Gorenje Keramika, ponudite kopijo s temi informacijami. Zahvaljujemo se vam za sodelovanje.

Pakiranje, označevanje, identifikacija in skladiščenje izdelkov

- Keramične ploščice Gorenje Keramika so razvrščene v kakovostne razrede in pakirane v kartonsko embalažo.
- Na kartonski embalaži s keramičnimi ploščicami so podatki, potrebni za identifikacijo izdelka: ime in dimenzija keramične ploščice, kaliber, niansa, datum proizvodnje, količina pakiranja (m^2 ali kos).
- Kaliber določa dovoljena dimenzijska odstopanja med dejansko in proizvodno mero keramične ploščice. Velikost keramične ploščice, določene za izdelavo, imenujemo proizvodna mera.
- V skladu s standardom EN 14411 so v procesu proizvodnje keramičnih ploščic minimalne spremembe barvnih nians neizogibne. Pri nakupu je treba biti pozoren, da so vse keramične ploščice, namenjene za vgradnjo na eni površini, iste nianse.
- Na zahtevo kupca se na embalažo natisne 13-mestna EAN črtna koda. Keramične ploščice so pakirane v kartonske škatle in zložene na paleto.
- Da lahko zagotovimo sledljivost izdelka, mora biti le-ta v originalni embalaži do začetka vgradnje.
- Neprimerno rokovanje lahko povzroči poškodbe na izdelku (lomi, okruški, razpoke,...).
- Izdelek, ki bo skladiščen dlje časa, mora biti ustrezno zaščiten pred zmrzovanjem.

Standardi

Gorenje Keramika proizvaja suho stisnjene talne keramične ploščice v tehnologiji monocuture, stenske keramične ploščice v tehnologiji monoporose ter dekorne keramične ploščice.

- Standard SIST EN 14411 se uporablja kot nacionalni standard, ki ga je objavil Evropski odbor za standardizacijo CEN.
- Ta standard je enak mednarodnemu standardu EN 14411, ki se uporablja v vseh državah članicah CEN v Evropi.
- Standard SIST EN 14411: Keramične ploščice – Definicije, razvrstitev, lastnosti, vrednote, skladnosti in označevanje, določa izraze in opredeljuje lastnosti za keramične ploščice najboljše komercialne kakovosti (1. kakovostni razred).

V skladu s standardom se keramične ploščice glede na metodo oblikovanja in vpijanje vode razvrščajo v skupine:

METODA OBLIKOVANJA	Suho stisnjene keramične ploščice				
Vprijanje vode	$E \leq 0,5\%$	$0,5\% < E \leq 3\%$	$3\% < E \leq 6\%$	$6\% < E \leq 10\%$	$E > 10\%$
Skupina	B I _a	B I _b	B II _a	B II _b	B III

Keramične ploščice Gorenje Keramika so razdeljene v naslednje skupine:

- Skupina BII_b, Dodatek K (talne keramične ploščice)
- Skupina BIII, Dodatek L (stenske keramične ploščice)
- Skupina BI_a, Dodatek G (glazirane porcelanske keramične ploščice), glej katalog Gorenje Keramika za GLAZIRANE PORCELANSKE KERAMIČNE PLOŠČICE 2018.

Tehnične informacije

Videz keramičnih ploščic in njihova izbira glede na mesto vgradnje

- Pri izbiri keramičnih ploščic je treba poleg vizualnih značilnosti (barva, dekor, tekstura, dekorativni elementi,...) upoštevati tudi tehnične značilnosti.
- V dodatku standarda SIST EN 14411 so podane minimalne tehnične zahteve glede njihovih tehničnih lastnosti: dimenzije, kakovost vidnih površin, fizikalne in kemijске lastnosti.
- Skladnost keramičnih ploščic je testirana z evropskimi standardi, njihove lastnosti pa navede proizvajalec. Metode za testiranje, ki se uporabljajo za določanje lastnosti keramičnih ploščic, so opisane v standardu EN ISO 10545.
- Vse lastnosti so navedene na kartonski embalaži in v Izjavi o lastnostih (DoP), ki predstavlja glavnji vir informacij za kupca.

Odpornost proti obrabi glaziranih keramičnih ploščic in njihova razvrstitev v PEI razrede

- Odpornost proti obrabi je lastnost, ki se upošteva pri izbiri talnih keramičnih ploščic, namejenih za vgradnjo na določeno mesto.
- Odpornost proti obrabi kaže lastnost glazirane površine keramične ploščice glede na površinsko obrabo. Odpornost proti obrabi se določa s pomočjo vrtenja abrazivnega medija na površini keramične ploščice ter z ocenjevanjem obrabe s pomočjo vizualne primerjave videza keramične ploščice, ki je bila izpostavljena obrabi, in keramične ploščice, ki pri testiranju ni bila izpostavljena obrabi.
- Izdelek se ocenjuje po lestvici od 0 do 5 (5 je najvišji razred odpornosti proti obrabi površine glaziranih keramičnih ploščic).

Razvrstitev v PEI razrede glaziranih talnih ploščic glede na njihovo odpornost proti obrabi

PEI	Možnost vgradnje
0	Glazirane keramične ploščice tega razreda niso priporočljive za talne oblage.
1	Keramične ploščice so primerne za tla, kjer večinoma hodimo v obuvalih z mehkimi podplati ali bosi, kjer ni umazanje (npr. kopalnice in spalnice brez neposrednega dostopa od zunaj).
2	Keramične ploščice so primerne za tla, kjer hodimo v obuvalih z mehkimi ali normalnimi podplati in kjer redkeje pride do manjše količine umazanije, ki lahko povzroči razenje keramičnih ploščic (na primer bivalni prostori, niso pa primerne za kuhinje, hodnike ali bolj obremenjene prostore). Niso primerne za hojo v obutvi z grobimi podplati, kot so na primer podkovani čevlji.
3	Keramične ploščice so primerne za tla, kjer hodimo z normalno obutvijo in kjer je lahko pogosto prisotna tudi manjša količina umazanije, ki lahko povzroči razenje keramičnih ploščic (kuhinje, hodniki, prehodi, balkoni in lože). Niso primerne za hojo v obutvi z grobimi podplati, kot so na primer podkovani čevlji.
4	Keramične ploščice so primerne za tla, kjer je redna pohodna obremenitv in je prisotna tudi umazanje, ki lahko povzroči razenje keramičnih ploščic. Razmere so težje, kot v razredu 3 (na primer vhodi, javne kuhinje, hoteli, razstavne in prodajne dvorane).
5	Keramične ploščice so primerne za tla s stalno veliko pohodno obremenitvijo in grobo umazanjem, torej v najslabših razmerah, za kar so keramične ploščice še lahko primerne (npr. javna področja, kot so nakupovalni centri, letališke in hotelske avle, javne pešpoti ter industrijska uporaba).

Ta razvrstitev je veljavna za uporabo v običajnih pogojih. Informacija o odpornosti proti obrabi je navedena poleg talnih keramičnih ploščic.

Tehnične informacije

Drsnost keramičnih ploščic z nihalom - Pendulum test

Drsnost keramičnih ploščic je tehnična lastnost, pomembna za talne keramične ploščice, ki prihajajo v stik z vodo in imajo potencialno visoko raven drsnosti. Pre-skusna metoda za določanje drsnosti keramičnih ploščic z nihalom se imenuje Pendulum test, PTV. Naprava za določitev drsnosti posredno ali neposredno meri koeficient trenja med materialom talne podlage in materialom, ki predstavlja podplat čevlja.

Razred drsnosti	PTV _{SUH ALI MOKER}	Opis
1	0–24	Večja možnost zdrsa
2	25–35	Zmerna možnost zdrsa
3	36+	Manjša možnost zdrsa

PTV_S – drsnost keramičnih ploščic na suhi podlagi
PTV_M – drsnost keramičnih ploščic na mokri podlagi

Tehnične lastnosti keramičnih ploščic

Za pravilno in skrbno vgradnjo keramičnih ploščic Gorenje Keramika je treba upoštevati:

- Pred vgradnjo keramičnih ploščic preverite kaliber, nianso in kakovost izdelka.
- Priporočljivo je, da se pri vgradnji vedno pomešajo keramične ploščice iz različnih škatel. Da preprečite neustrezen videz vgrajenih keramičnih ploščic, jih predhodno namestite na mesto vgradnje in jih vgradite le, če ste zadovoljni z nastalim vzorcem.
- Preberite opozorila na kartonski embalaži.
- Stenske ploščice pred vgradnjo namočite v vodi.
- Uporabite primerno orodje za vgradnjo keramičnih ploščic (zobato lopatico, belo gumijasto kladivce, klešče za keramične ploščice, gumijasto lopatico za fugiranje).
- Poskrbite, da je površina, na katero se bodo vgradile keramične ploščice, ravna, čista in zaščitena pred vlago.
- Posebno pozornost namenite izbiri lepila, ki ga boste uporabili (posvetujte se z dobavitelji lepila). Vsak tip keramičnih ploščic zahteva ustrezno lepilo.
- Lepilo enakomerno nanesite na podlago v manjšem, omejenem obsegu. Priporočamo, da lepilo na zadnjo stran keramične ploščice nanesete in utrete po celotni površini. Plast lepila ne sme biti debelejša od 5 mm.
- Da zagotovite pravilno vgradnjo, priporočamo uporabo vodne tehnike.
- Strokovnjak za polaganje keramičnih ploščic mora izbrati ustrezno velikost fug, da se zagotovi ustrezna struktura vzorca znotraj dovoljenih dimenzijskih odstopanj. Gorenje Keramika priporoča vgradnjo keramičnih ploščic z minimalno fugo 1,5 mm.
- Ne uporabljajte neobstojnih barvnih fugirnih mas ali barvil (topna v vodi). Takšni materiali lahko otežijo čiščenje vgrajenih keramičnih ploščic.
- Tako po vgradnji keramičnih ploščic, preden se fugirna masa in lepilo zasušita, očistite površino keramičnih ploščic z gobico in čisto vodo. Nikoli ne uporabljajte trdih materialov, s katerimi bi lahko poškodovali površino keramičnih ploščic (kovinske lopatice, abrazivna čistilna sredstva,...). Vedno upoštevajte pravila, ki jih priporoča proizvajalec lepila.

Fugiranje

- Pred nanosom fugirne mase je treba počakati najmanj 24 ur od vgradnje keramičnih ploščic.
- Iz fug je treba očistiti vse ostanke lepila in ostalo umazanijo.
- Fugirna masa se nanaša s trdo, ostro, gumijasto lopatico za fugiranje.
- Fugirne linije je treba očistiti z vlažno gobo pred strditvijo fugirne mase.

Reklamacije

- Kupec je ob prevzemu dolžan preveriti ustreznost paketov. Za poškodovane izdelke, ki se poškodujejo med kasnejšim transportom ali pri nepravilnem rokovovanju, ne priznavamo reklamacij.
- Reklamacije glede kakovosti, nianse ali neustreznih dimenzijskih mora kupec prijaviti pred vgradnjo.
- Reklamacija za vgrajene keramične ploščice se ne prizava, razen v primeru skritih napak na izdelku. Skrita napaka je napaka, ki se pokaže potem, ko je kupec prevzel izdelek in je z običajnim pregledom pri prevzemu ni bilo mogoče opaziti. V primeru, da ima izdelek skrito napako, lahko kupec reklamacijo prijavi v roku dveh mesecev od dneva, ko je bila napaka odkrita, oziroma v roku 2 let od dneva nakupa. Ob prijavi reklamacije je treba obvezno priložiti račun in kartonsko embalažo.
- Priporočamo, da kupec za primer reklamacije shrani vsaj eno keramično ploščico ter kartonsko embalažo.

Kupcu se reklamacija ne prizna, če:

- je nepravilnost na keramičnih ploščicah nastala zaradi njegovega neustreznega ravnanja;
- je keramične ploščice vgradila nestrokovna oseba;
- so bile keramične ploščice uporabljenne na drug način, kot je njihov namen;
- niso bila upoštevana navodila in opozorila.

Kontakt: keramika@gorenje.com

Navodila za vzdrževanje in čiščenje

Če se keramične ploščice ne morejo popolnoma očistiti, v tabeli navajamo primerena čistila za različne tipe umazanje.

Ko so keramične ploščice položene in fugirane, je priporočljivo, da se s površine odstrani odvečno lepilo in fugirna masa. Čiščenje mora biti izvedeno v 24 urah po vgradnji (fugirna masa mora biti popolnoma posušena) in najkasneje 2 dni po vgradnji, ker je kasneje čiščenje oteženo.

Tip madeža	Čistilna sredstva
Olje, črnilo, marker pisalo, paradižnik, sadje, čokolada, maščoba	Organska topila: alkohol, terpentin, aceton, alkalni detergenti v tekočem stanju ali v obliki prahu bikarbonata
Katran, guma, krema za čevlje, barva, grafit, vosek, lak za nohte	Organska topila: alkohol, terpentin, aceton, alkalni detergenti v tekočem stanju ali v obliki prahu bikarbonata
Kava, sladoled, nikotin, vino	Alkalni detergenti v tekočem stanju ali v obliki prahu bikarbonata
Apno, cement, pivo, brezalkoholne pijače, sadni sokovi, vodni kamen	Kis, razredčena klorovodikova kislina
Lepilo, žvečilni gumi, odtis gume s podplata čevlja	Organska topila: alkohol, terpentin, aceton, razredčena klorovodikova kislina
Kri, jod	Oksidant: kisikova voda

Poškodbe na površini keramičnih ploščic so običajno posledica uporabe:

- agresivnih čistilnih sredstev (visoka koncentracija),
- čistilnih sredstev, neprimernih za čiščenje keramičnih ploščic.

Nikoli ne uporabljajte čistil, ki so izdelana na osnovi fluorovodikove kislino ali njenih derivatov (izdelki za preprečevanje rje in sredstva za odstranjevanje madežev v spremu pogosto vsebujejo fluorovodikovo kislino). Fluorovodikova kislina na površini keramičnih ploščic povzroči nepopravljivo škodo. Vse izdelke, ki so navedeni v tabeli, najdete v običajnih trgovinah in trgovskih centrih.

Spološno pravilo je, da višji razred drsnosti keramičnih ploščic pomeni težje čiščenje. Prosimo, da to upoštevate pri izbiri keramičnih ploščic.

Čiščenje dekornih keramičnih ploščic

Za doseganje elegantnega visokokakovostnega videza pri dekornih keramičnih ploščicah (sredinski dekorji, listeli) uporabljamo prefijene tehnike z uporabo žlahtnih materialov (zlato, srebro, platina), zato zahtevajo posebno skrbnost tako pri vgradnji kot čiščenju.

Priporočamo, da za čiščenje uporabljate samo mehko krpo in vodo. Izogibajte se uporabi močnih, abrazivnih čistil tako pri čiščenju fugirne mase po končani vgradnji kot pri vsakodnevnom čiščenju.

Dear Buyers,

In order to prevent complaints from the customers, we recommend you to copy this document with information and deliver it to your customers, buying Gorenje Keramika tiles. Thank you for your cooperation.

Packaging, marking, identification and storage of the product

- The Gorenje Keramika tiles are automatically sorted by quality classes and packaged in cardboard packaging.
- Packaging unit for ceramic tiles (box) includes all data required for identification of the product: name and dimensions of the tile, caliber, shade, date of manufacture, packaging quantity (m^2 or number of pcs.).
- The caliber defines permitted dimension tolerance between the actual dimension and the manufacturing dimension of the tile. The size of the tile defined for manufacture is called manufacturing dimension.
- In accordance with standard EN 14411 the minimum changes in colour are inevitable during the manufacturing process. When buying the tiles, be careful and make sure that all tiles used for installation on one surface have the same shade.
- Upon the request of the buyer, a special 13 digit EAN barcode can be printed on the box. The tiles are packaged into cardboard box and stacked on the pallet.
- In order to assure the product keeps its characteristic features, the tiles must be stored in original packaging until the installation.
- Handling/manipulation with the tiles other than recommended/appropriate, may cause damages to the product (breach, chipping, fissures,...).
- If the product is to be stored for a longer period of time, make sure it is properly protected against freezing.

Standards

Gorenje Keramika dry-pressed tiles are manufactured with monocotura technology and wall tiles are manufactured with monoporous technology, and decor tiles.

- Standard SIST EN 14 411 is used as national standard, as published by the European Council for CEN standardization.
- This standard corresponds to the standard EN 14 411, which is in use in all member states in Europe, which are members of CEN.
- Standard SIST EN 14 411: Ceramic tiles - Definitions, classification, characteristics, evaluation of conformity and marking, defines terms and characteristics for ceramic tiles of premium class (1st quality class).

In accordance with the applicable standard, the tiles are classified in groups, considering the shaping technique and water absorption:

SHAPING METHOD	Dry-pressed ceramic tiles				
	Water absorption	$E \leq 0,5\%$	$0,5\% < E \leq 3\%$	$3\% < E \leq 6\%$	$6\% < E \leq 10\%$
Group	B Ia	B Ib	B IIa	B IIb	B III

Ceramic tiles Gorenje Keramika are categorised in three groups:

- Group BII_a, Annex K (floor tiles)
- Group BIII, Annex L (wall tiles)
- Group BI_a, Annex G (glazed fine porcelain tiles), see catalogue Gorenje Keramika for GLAZED FINE PORCELAIN TILES 2018.

Technical information

Visual appearance of tiles and selection of tiles considering the place of installation

- When selecting the tiles, next to the visual characteristics of the tile (colour, decor, texture, decorative elements,...) the technical characteristics of the tiles must be taken into account.
- In Annex to standard SIST EN 14 411, minimum technical requirements concerning technical characteristics of the tiles are defined: dimensions, quality of visual surfaces, physical and chemical characteristics.
- Conformity of ceramic tiles has been tested in accordance with European standard and their characteristics must be listed by the manufacturer. Test methods used for defining the characteristics of the ceramic tiles are defined in standards EN ISO 10 545.
- All characteristics are identified on the cardboard box and in the Declaration of Performance (DoP), a document which is the main source of information for the buyer.

Resistance to abrasion of glazed tiles and their classification in PEI classes

- Resistance to abrasion is a characteristic, which should be considered when selecting the floor tiles to be installed in specific place;
- Resistance to abrasion demonstrates characteristic of the glazed surface of the tile resistant to abrasion. Resistance to abrasion is determined by means of rotating the abrasive medium on the surface of the ceramic followed by evaluating the abrasion effect by visually comparing the appearance of the tile subjected to abrasion and the tile that was not subjected to abrasion.
- The product is graded from 0 to 5 (5 is the highest grade of resistance to abrasion of the glazed tile surface).

Grading to PEI classes of glazed floor tiles considering resistance to abrasion

PEI	Installation options
0	Glossy tiles, not recommended for use as floor tiles.
1	Tiles are recommended for floors where traffic is made mostly with bare foot or soft soles, no dirt present (e.g. bathrooms and bedrooms, no direct access from outside).
2	Tiles are recommended for floors where traffic is made mostly with soft or normal soles, with occasional dirt present in smaller extent, which can cause abrasion of tiles (e.g. living rooms; but not for kitchen, hallways or rooms with frequent traffic). Not suitable for traffic with shoes with rough soles, heavy-duty shoes.
3	Tiles are recommended for floors where traffic is made mostly with normal footwear, with frequent presence of smaller amount of dirt, which can cause abrasion of tiles (e.g. kitchen, hallways, passages, balconies and loggias). Not suitable for traffic with shoes with rough soles, like heavy-duty shoes.
4	Tiles are recommended for floors with regular traffic load, with presence of dirt, which can cause abrasion of tiles. Conditions are more harsh than in class 3 (e.g. public kitchens, entrance, hotels, sales areas, exhibition rooms).
5	Tiles are recommended for floors with permanent and frequent traffic with presence of dirt, very harsh conditions, but still appropriate for use of tiles 3 (e.g. public areas, like shopping malls, airport and hotel hallways, public pathways, industrial use).

This classification applies in case of use under normal conditions. Information concerning resistance to abrasion is defined next to floor ceramic tiles.

Technical information

Slip resistance of ceramic tiles – Pendulum test

Slip resistance of ceramic tiles is a technical characteristic, which is important for floor tiles coming in contact with water and with high potential slipping characteristic level. Slip resistance of ceramic tile is tested with testing method called Pendulum test, PTV. The device for determining slip resistance measures the friction coefficient directly and indirectly between the material of the flooring base and material representing the sole of the shoe.

Slip resistance class	PTV _{DRY OR WET}	Description
1	0-24	High possibility of slip
2	25-35	Moderate possibility of slip
3	36 +	Low possibility of slip

PTV_{DRY} – slip resistance of tile on dry surface

PTV_{WET} – slip resistance of tile on wet surface

Instructions for installation

In order to assure correct and precise installation of the ceramic tiles Gorenje Keramika, please follow the instructions:

- Before installation, check the caliber, shade and quality of the tiles.
- For installation in one space, we recommend mixing of tiles from various boxes. In order to prevent unwanted appearance of the tile pattern, we recommend arranging the tile on the place of installation and proceeding with installation after the pattern meets your expectations.
- Read the warnings printed on the cardboard box.
- Before installation, soak wall tiles in water.
- Use appropriate tool for installation of ceramic tiles (square-notch trowel, white rubber mallet, tile nipper and rubber grout float).
- Make sure the surface on to which the tiles are installed, is flat, clean and protected against moisture.
- Pay special attention to selecting correct adhesive to be used (consult adhesive suppliers). Different type of ceramic tiles require different type of adhesive material.
- Apply the adhesive uniformly to the base, use smaller amounts. We recommend applying the adhesive on the bottom side of the tile through the entire surface of the tile. The adhesive layer must not be thicker than 5 mm.
- In order to assure proper installation, we recommend use of bubble level.
- Let a qualified tile installer to select proper dimension of the grouting between the tiles as to make sure the proper structure of the pattern is assured, within the dimension tolerances. Gorenje Keramika recommends installation of ceramic tiles with minimum grouting of 1,5 mm.
- Do not use coloured grouting material which are not water resistant (water soluble). Use of any such material may cause problems with cleaning.
- Immediately after installation of the tiles, before the grouting material and adhesive is hardened, clean the surface of the tiles with sponge and clean water. Do not use hard tools or abrasive material, which might cause damage to the surface of the tiles (metal trowel, abrasive cleaning agents...). Always follow the instructions provided by the manufacturer of the adhesive.

Grouting

- Before application of grouting mix wait for minimum 24 hours after the installation of the tiles.
- Always cleanse the residues of the grouting mix and any other residues from the surface of the tiles.
- Apply the grouting mix using a solid, sharp rubber grouting trowel.
- Before the grouting mix solidifies, clean the grouts with damp cloth.

Complaints

- Upon acceptance, the buyer must inspect the boxes. Any damages which might be caused during the transport or incorrect handling, can not be subject to complaints.
- Complaints concerning the quality, shades or inadequate dimensions must be made before the tiles are installed.
- No complaints whatsoever can be made once the tiles are installed, except in case of hidden defects. A hidden defect is a defect identified after the buyer accepted the product and which could not have been identified with standard inspection upon acceptance. In case of hidden defect, the buyer shall have the right to file the complaint within two months from the date of identifying the defect, or within 2 years after the date of purchase. Upon filing a complaint, an original invoice and factory packaging must be enclosed.
- We recommend to the buyer to save at least one piece of the tiles and cardboard box for the case of complaint.

The complaint of the buyer shall not be considered legitimate in any of the following cases:

- If the defect/damage has been caused to the tile by the fault of the buyer's mishandling;
- If the ceramic tiles were not installed by a qualified tile installer;
- If the ceramic tiles were used in a manner other than recommended;
- In case of failure to observe the provided instructions and warnings.

Contact: keramika@gorenje.com

Instructions for maintenance and cleaning

If you find the tiles hard to be cleaned, please refer to the Table to find appropriate cleaning agents for different types of dirt.

Once the ceramic tiles are installed and grouted, we recommend cleansing any access grouting mix from the surface of the installed tiles. The tiles must be cleansed within 24 hours after installation (the grouting mix must be fully dried) or within 2 days at latest after installation, later on, it will be extremely hard to remove the residues.

Stain type	Cleaning agents
Oil, ink, felt pen, tomato, fruits, chocolate, grease	Organic solvents: alcohol, turpentine oil, acetone, liquid alkaline detergents or bicarbonate powder
Tar, rubber, shoe polish, colour, charcoal, wax, nail polish	Organic solvents: alcohol, turpentine oil, acetone, liquid alkaline detergents or bicarbonate powder
Coffee, ice cream, nicotine, wine	Liquid alkaline detergents or bicarbonate powder
Lime, cement, beer, soft-drinks, fruit juices, limescale	Vinegar, diluted hydrochloric acid
Glue, chewing gum, marks from rubber soles	Organic solvents: alcohol, turpentine oil, acetone, diluted hydrochloric acid
Blood, iodine	Oxidizing agent: Oxygenated water

Damages to the surface of the ceramic tiles are usually the consequence of using any of the following agents:

- Aggressive cleaning agents (heavily concentrated),
- Cleaning agents which are not appropriate for ceramic tiles.

Never use cleaning agents made on the basis of hydrofluoric acid or its derivatives (e.g. rust control products or stain removal sprays often contain hydrofluoric acid). Hydrofluoric acid will cause irreparable damage to the surface of the tile. All products listed in the Table are available in stores.

As a general rule, the higher the slip resistance class, the harder is cleaning. Please take into account this fact when selecting the right tile for your intended use.

Cleaning of decorating tiles

To assure the elegant high-end appearance of the decorative tiles (central decors, listello tiles), we use sophisticated technique using precious material (gold, silver, platinum), therefore those tiles require special care in installation and cleaning.

We recommend cleaning with cloth and water only. Do not use aggressive, coarse cleaning agents, either for removal of grout residues after installation or for regular daily cleaning.

TEHNIČNI NAČRTI MOZAIKOV / TECHNICAL DESIGN FOR MOSAICS

MOSAIC 1

OPOMBA:

Dejanski izgled keramičnih ploščic se lahko razlikuje od slik v tem katalogu. Ploščice, proizvedene s tehnologijo digitalnega dekoriranja, imajo različna lica. Kljub skrbnosti ne moremo zagotovljati, da objavljene tehnične informacije ne vsebujejo pomankljivosti ali napak. Pridržujemo si pravico do spremembe programa.

Vsebine, objavljene v tem katalogu, so v lasti družbe Gorenje Keramika d.o.o. in so v zakonsko dovoljenem okviru predmet avtorske zaščite ali druge oblike zaščite intelektualne lastnine. Navedene vsebine so lahko reproducirane le v nekomercialne namene in se jih ne sme spremenjati ali drugače uporabljati, razen tako, kot je določeno v tem besedilu. Vsebin (vključno s fotografijami), objavljenih v tem katalogu, se ne sme prepisovati, razmnoževati ali kako drugače razširjati v komercialne namene brez predhodnega izrecnega pisnega dovoljenja družbe Gorenje Keramika d.o.o..

Gorenje Keramika d.o.o. si pridržuje vse pravice do spremembe vsebin, objavljenih v tem katalogu.

NOTE:

Actual visual appearance of the ceramic tiles may differ from the pictures shown in this brochure. The tiles manufactured with the technology of digital decorating have different face sides. In spite of taking great care, we cannot guarantee that the technical characteristics will not contain any errors. We reserve the right to make changes to the product range.

Contents published in this brochure are the property of the company Gorenje Keramika d.o.o. and are under applicable law copyright protected or are subject to protection of intellectual rights. The content may be reproduced only for non-commercial purpose and must not be modified or used in any way other than recommended in this document. The content (including photographs published in this brochure) may not be copied, reproduced or any other way communicated to commercial purpose without previous explicit consent of the company Gorenje Keramika d.o.o..

Gorenje Keramika d.o.o. reserves the right to changes made to the content published in this brochure.
